

ABDULAZEEZ ALANI

Frontend Developer (React / Next.js)

+234 816 595 7703 alani.abdulazeez.akinpelumi@gmail.com
Portfolio GitHub Ibadan, Nigeria

SUMMARY

Frontend developer specializing in React and Next.js, with experience shipping responsive interfaces, authentication flows, and self-directed web products from build to deployment. Currently working as an AI Native Frontend Engineer Intern at FlyRank AI, where I apply AI-driven workflows across development and deployment, and as a Frontend Developer at Synoloop Solutions, where I delivered 5 authentication flows and translated Figma designs into accessible dashboard UI. Alongside client work, I've shipped a portfolio site plus three live projects — a weather app, typing-speed tester, and color picker — strengthening my work in React state management, API integration, and modern deployment workflows.

EXPERIENCE

AI Native Frontend Engineer Intern FlyRank AI

07/2026 - Present

- Developed and deployed a full-stack portfolio site in Next.js, TypeScript, and Tailwind CSS, creating a live project that demonstrates end-to-end frontend execution and AI-augmented workflows from design through release.
- Created a source-grounded personal AI agent connected to Google Drive through MCP, enabling grounded review of study materials instead of relying on unverified responses.
- Used structured prompt engineering and AI-assisted debugging across shipped projects, improving output reliability by validating and correcting AI-generated code before release.

Frontend Developer Synoloop Solutions

01/2026 - Present

- Delivered 5 authentication flows fully integrated with backend APIs for a client-facing React and Next.js dashboard, enabling end-to-end user access and account recovery.
- Translated Figma designs into responsive, accessible Tailwind CSS components, producing production-ready interfaces that worked across desktop and mobile breakpoints.
- Engineered solutions for three critical pre-existing functional bugs during a live platform redesign, enhancing user experience and preventing future system instability.

EDUCATION

Bachelor of Science in Chemistry University of Ibadan — First Class Honours

2016 - 2020

PROJECTS

Weather App (React, TypeScript, Tailwind CSS, Open-Meteo API)

- Implemented geolocation-based weather detection, saved locations, unit switching, and hourly/daily forecasts, with loading and error states throughout. [Live demo](#)

Typing Speed Test App (React, JavaScript, CSS, Local Storage)

- Built a typing speed tester that measures WPM and accuracy across 2 modes (timed, passage-based) and multiple difficulty levels, with local persistent personal-best tracking. [Live demo](#)

Color Picker (React, Hooks, Reducers, Context API)

- Designed a color picker supporting 4 formats (HEX/RGB/RGBA/HSL) with drag-and-drop palette management and persistent local storage. [Live demo](#)

KEY ACHIEVEMENTS

- Authentication System Delivery**
Shipped 5 complete authentication flows (login, registration, forgot/reset/change password) integrated with backend APIs for a client dashboard.
- Personal AI Agent Development**
Designed and built a personal AI agent (Claude + Google Drive via MCP), verified against 5 defined test cases before shipping.
- UI Design Transition**
Translated 50+ Figma designs into responsive, accessible interfaces across 3 live projects, with more than 95% accuracy.
- Figma-to-React Implementation**
Delivered a Figma-to-React redesign for a live property listing platform, independently catching and fixing 3 pre-existing functional bugs beyond scope.
- AI-Accelerated Site Production**
Rapidly produced 9 live client demo websites using AI-powered web development tools, for real estate and e-commerce pitch scenarios.

SKILLS

React	TypeScript	Tailwind CSS
Python	Prompt Engineering	
AI-Assisted Development	JavaScript	
Next.js	HTML	CSS
Git	GitHub	

CERTIFICATIONS

- [The Web Developer Bootcamp](#)
Full-stack web development: HTML, CSS, JavaScript, React, Node.js, MongoDB
- [The Modern React Bootcamp](#)
Class and functional components, Hooks, Context API, reducers, routing, Next.js
